Avitech Announces Three Additions to Sequoia (MKC) Series

Redmond, WA, USA – August 9, 2010 – Avitech International Corporation is proud to announce three new additions to its innovative Sequoia series. Formerly known as the MKC series, Sequoia modules add mouse and keyboard control (KVM) functions to Avitech's acclaimed multiviewers. The new Sequoia 2x2V, Sequoia-2H2V, and Sequoia-4H modules join Sequoia-204 modules in a series of products which offer extraordinary efficiency to users of file-based systems, who can now control multiple computers with one display and set of input devices while monitoring other feeds at the same time.

Sequoia-204 modules are designed to be integrated with Avitech's VCC-8000 multiviewers, enhancing existing high-quality multiviewer functions with KVM functionality. The new Sequoia 2x2V, Sequoia-2H2V, and Sequoia-4H modules incorporate KVM functions, Mic/Audio input ports, speakers, a USB hub, and a multiviewer into compact form factors, delivering freedom and functionality for multiple-system applications while conserving space and energy.

The Sequoia series has a broad range of potential applications, says Morris Gong, President and CEO of Avitech. "Anyone who needs to interact with a number of systems at once will find Sequoia modules useful. We designed these products so that they could be used for anything from server monitoring to video post-production. Avitech is committed to innovation to meet the needs of our users, and we believe that we're going to make difficult work a lot easier with our new Sequoia modules."

Avitech is also currently in the process of developing Sequoia modules which will enable simultaneous control of connected systems by multiple users.
