

Connecting to Galaxy via IP

Products: MCC-8004 Series, VCC-8000 Series, Rainier Series, MCC-8001 Series, ACC-8000 Series.

Starting Galaxy Using IP

The Galaxy communication window allows users to choose the method of communication with the module. There are two ways to communicate with the module - IP and RS-232. When communicating with IP, please make sure that your computer is properly configured. For detailed instructions on how to set-up your computer/controller to communicate via IP please see the detailed steps at the end of this document.

 Select User Define if you know the IP address of the module you are connecting. Otherwise, choose Automatic Search and allow Galaxy to recognize your module's IP address.

2. The default IP of the module is 210.100.100.151. Set IP 1 to match your current settings.

Release Date: 7-13-2009 Page: 1 of 2 Revision: 01

3. Once the module has been found, Galaxy will report the IP and ID/Type of module connected. Select **OK** to continue into Galaxy.
