Touch Screen Control Panel

TACP-100

Avitech's Touch Screen Control Panel (TACP) is an ideal addition to your current multiviewer environment. Using touch-sensitive graphical buttons, users have the ability to control and configure Avitech multiviewers in any array of custom designed configurations.

One-Touch Convenience

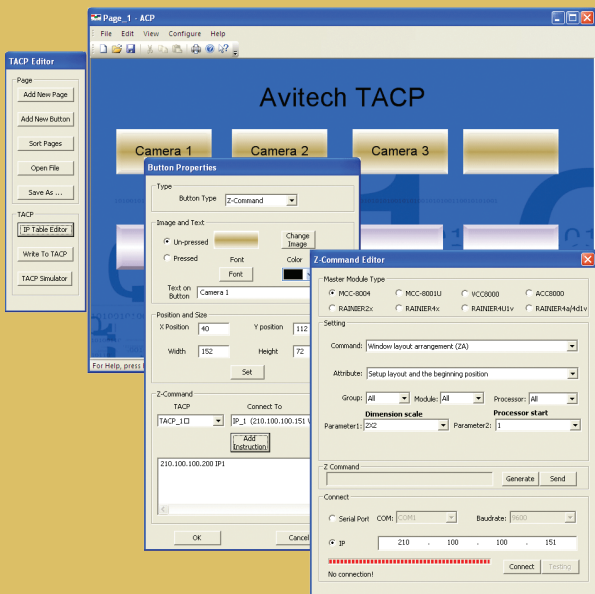

Using pre-defined or custom designed layouts, users can quickly access a variety of multiviewer functions with One-Touch Convenience. TACP's graphical user interface is simple, intuitive, and customizable for each users specific needs.

Avitech Software Control Panel (ACP)

ACP is a compact and powerful software tool used to configure the TACP. Based on the Avitech Z-command coding script, it allows users to create custom action scripts and graphical button layouts.

Peer-to-Peer Communication

Multiple TACP's can be configured together in a peer-to-peer environment. The number of modules the user can access will increase exponentially with the addition of multiple TACP's.
